DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I, claims 1-6 in the reply filed on 08/17/2005 is acknowledged. The traversal is on the ground(s) that the examiner fails to provide evidence that the combination (claims 1-6) do not require particulars of the subcombination claims for patentability. The applicant further states in his response Group II should include not only claim 7 but also claims 8 and 9.

The following is reason provided to clarify the restriction between the combination claims and subcombination claims:

In the instant case, the details of the control apparatus are not required for patentability of the combination. The subcombination has separate utility such as controlling the amount of slip of a lockup clutch for the purpose of improving fuel economy of a vehicle.

Claims 8-15 are the process/apparatus claim. Therefore, they can not be separate from each other.

With regard to the species election, the examiner withdraws said election.

The requirement is still deemed proper and is therefore made FINAL.

An action on claims 1-6 follows:

Allowable Subject Matter

The indicated allowability of claims 1, 2, 4-6 is withdrawn in view of the newly discovered reference(s) to Adachi (US 6039675A). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-6 are rejected under 35 U.S.C. 102 (b) as being anticipated by Adachi (US 6039675A)

Regarding claims 1, 2, and 4-6, Adachi teaches an automatic transmission for a vehicle comprising: an automatic transmission including a torque converter provided with a lockup clutch (Adachi, abstract), a controller (12) provided to determine target slip rotation speed (Adachi, column 4, lines 35-40).

The statements of intended use or field of use, "that controls...", "adapted to" clauses are essentially method limitations or statements of intended or desired use. Thus, these claims as well as other statements of intended use do not serve to patentably distinguish the claimed structure over that of the reference. See In re Pearson, 181 USPQ 641; In re Yanush, 177 USPQ 705; In re Finsterwalder, 168 USPQ 530; In re Casey, 512 USPQ 235; In re Otto, 136 USPQ 458; Ex parte Masham, 2 USPQ 2nd 1647.

See MPEP § 2114 which states:

Art Unit: 3663

A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from the prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. Ex parte Masham, 2 USPQ 2d 1647

Claims directed to apparatus must be distinguished from the prior art in terms of structure rather than functions. In re Danly, 120 USPQ 528, 531.

Apparatus claims cover what a device is not what a device does. Hewlett-Packard Co. v. Bausch & Lomb Inc., 15 USPQ2d 1525, 1528.

As set forth in MPEP § 2115, a recitation in a claim to the material or article worked upon does not serve to limit an apparatus claim.

Regarding claim 3, Adachi also inherently teaches that the controller calculate the slip rotations speed of the lockup clutch, and set the calculated slip rotation speed as the target slip rotation speed if a downshift of the automatic transmission is executed since the controller (12) determines drive duty ratio and then determines the target slip rotations speed (see Adachi, column 4, lines 35-45).

Response to Arguments

Applicant's arguments with respect to claim 3 have been considered but are moot in view of the new ground(s) of rejection.
